

Revision Date: 12/3/2021

This guide includes information to help you review the Post-Acute Placement Referral report that is sent with the initial Service Request in EpicCare Link. It will also show you what information is included in the report.

## How to Access the Post-Acute Placement Referral Report

The EpicCare Link team recommends using the Post-Acute Placement Referral report at the lower half of the Service Requests screen to review the clinical information needed to accept a patient placement. This is a real-time report and will update as information is populated in the patient's chart.

The screenshot shows the 'My Messages' section with a 'Service Requests' tab selected. A table lists several requests, with one selected and its details expanded below. A red box highlights the expanded view, which includes a warning about visibility of responses and a 'Comments' section with 'Patient Information'.

Status	Msg Date	Msg Time	Sent By	Patient	Request Status	Request From	Request To	Last Attending Provider	Aut
